

## Glycerol-3-phosphate oxidase from Microorganism

### Product Information

<b>Cat#</b>	DIA-200
<b>Abbr</b>	L-α-glycerophosphate oxidase (Microorganism)
<b>Similar</b>	Glycerol-3-phosphate oxidase
<b>Source</b>	Microorganism
<b>Description</b>	In enzymology, a glycerol-3-phosphate oxidase (EC 1.1.3.21) is an enzyme that catalyzes the chemical reaction: sn-glycerol 3-phosphate + O <sub>2</sub> ↔ glycerone phosphate + H <sub>2</sub> O <sub>2</sub> . Thus, the two substrates of this enzyme are sn-glycerol 3-phosphate and O <sub>2</sub> , whereas its two products are glycerone phosphate and H <sub>2</sub> O <sub>2</sub> . This enzyme belongs to the family of oxidoreductases, specifically those acting on the CH-OH group of donor with oxygen as acceptor. This enzyme participates in glycerophospholipid metabolism. It employs one cofactor, FAD.
<b>Applications</b>	This enzyme is useful for enzymatic determination of triglyceride when coupled with lipoprotein lipase and glycerokinase in clinical analysis.
