

Abbokinase

Product Information

Cat#	DIA-590
Descriptions	Abbokinase is a high-efficiency fibrinolytic protease with stable biological activity. It can effectively activate plasminogen into active plasmin to break down fibrin aggregates, owning low side effects and strong targeting performance for scientific research on thrombolytic mechanism and related in vitro biological experiments.
Applications	Abbokinase is used for fibrinolytic activity detection kit development and fibrin hydrolysis assay reagent preparation for in vitro diagnostic research.
CAS No.	9039-53-6
Assay	USP/EP/JP/CP min
