

Ascorbate Oxidase

Product Information

Cat#	DIA-632
Descriptions	Ascorbate Oxidase is a copper-containing oxidoreductase that specifically catalyzes the oxidation of ascorbic acid to dehydroascorbic acid, features outstanding substrate specificity, and is widely applied in vitamin C detection, biosensor construction and redox metabolism research.
Applications	Ascorbate Oxidase is widely used in vitamin C content detection kits and biosensor construction for food and biological sample assay.
CAS No.	9029-44-1
