

N-Acetylglucosaminyltransferase V (MGAT4B)

Product Information

Cat#	DIA-774
Descriptions	N-Acetylglucosaminyltransferase V (MGAT4B), or GnT-IVb, is a homologous isoform of MGAT4A with tissue-specific expression patterns, catalyzes N-glycan branching modification, and plays distinct roles in organ-specific glycosylation regulation.
Applications	N-Acetylglucosaminyltransferase V (MGAT4B) is applied in tissue-specific N-glycan branching detection kits and organ glycosylation regulation assay reagent development.
CAS No.	24-1-14514
