

Ultra Nuclease

Product Information

Cat#	DIA-899
Descriptions	UltraNuclease is a highly active broad-spectrum nuclease that degrades all forms of DNA and RNA into 5'-monophosphate-terminated oligonucleotides, efficiently removes nucleic acid contaminants from biological samples, and is widely used for protein and vaccine purification processes.
Applications	UltraNuclease is applied in nucleic acid contamination removal detection kits and biopharmaceutical purification quality control reagent development.
CAS No.	9025-65-4
Enzyme Commission Number	EC 3.1.30.2
