

Universal Plus DNA Library Prep Kit for Illumina

Product Information

Cat#	Kit-063
Description	<p>This DNA library preparation kit is specifically optimized for Illumina high-throughput sequencing platforms. It integrates DNA fragmentation, end repair, and dA-tailing into a single-step reaction, eliminating the need for mechanical DNA shearing. Reaction products require no purification prior to adapter ligation, library enrichment, and size selection, enabling efficient conversion of 100 pg–1 µg input DNA into Illumina-compatible sequencing libraries.</p> <p>The simplified workflow significantly reduces hands-on time and supports both PCR and PCR-free library construction. The kit is compatible with DNA from diverse sources and a wide range of input amounts, with fragment size easily controlled by adjusting fragmentation time.</p>
Storage	-30 °C to -15 °C
Applications	PCR and PCR-free library construction; whole-genome sequencing; whole-exome or other targeted capture sequencing; metagenomic sequencing.
Product Overview	<p>Broad compatibility: Easily accommodates different species, varying input amounts, and multiple template types.</p> <p>Simple operation: Desired libraries can be obtained by adjusting fragmentation time based on target insert size.</p> <p>High library yield: Excellent library conversion efficiency and improved sample quality.</p>
Package	<p>24 rxns</p> <p>FEA Buffer: 120 µL</p> <p>FEA Enzyme Mix: 240 µL</p> <p>Rapid Ligation Buffer 3: 600 µL</p> <p>Rapid DNA Ligase: 120 µL</p> <p>HiFi Amplification Mix: 600 µL</p> <p>PCR Primer Mix for Illumina: 120 µL</p> <p>Neutralization Buffer: 120 µL</p>
