Human STK33 Protein, Recombinant

Product Information

Cat#	TRA-761
Specification	5µg(min)
Description	Full-length human STK33 was expressed as an N-terminal GST fusion protein using a baculovirus expression system. GST-STK33 was purified by glutathione sepharose chromatography. Following cleavage with PreScission protease, the GST-free STK33 59 kDa was collected in the flow-through fraction from a subsequent glutathione sepharose step.
